Record Association

Each **Day** record in **DataNet2** is <u>always associated</u> with a **Well Operation** record, hence these two are considered as the main records. Before adding in or updating **Daily Reporting** information, for example **Activity** or **BHA Run**, it is necessary to either:

  a. Create a **Well** record followed by the **Day** record if there is no record available from the **Well Operations** and **Day** selectors

      <u>or</u>

  b. Select a **Well** record followed by the **Day** record if current records exist in the system.

If no **Well** or **Data** record is selected from the **Well Operations** and **Day** selectors, a system prompt will be shown as a reminder.
