

Quick Overview

Sending Data to Town

To send a **Daily Report** to the town database, select the **Send to Town** button from the **Daily Data** screen in the **Data Entry** menu.

Figure 1.1 Send To Town button

The level of data sent to town depends on which **Data Entry Screen** is selected.

1. To send all the **Daily Data** for an entire **Well** record to town, mouse-over the **Well Data** tab and select **Basic Well Data**. Click the **Send to Town** button. If a **Well** record has plenty of **Day** entries, this can mean sending quite a large amount of data and should be used only when needed.
2. To send **Daily Data** for a single day to town, mouse-over the **DrillNet** tab and select **Daily**. Click the **Send to Town** button. This will send a small amount of data (~30kb) and will only take a couple of minutes to upload even with slow Internet connections.
3. The system will display a prompt requiring you to confirm your selection. Click the **Confirm** button and the system will complete the Send process automatically.
4. Once the data have been synchronized across, a system message will appear to notify completion of process.

Important Note:

Depending on the QC Settings set by user in the DataNet system, the Send to Town function may overwrite either the Day or the entire Well record in town's database.
